

Wireless Access Help

Bryant University provides campus-wide wireless internet access. In order to access this service you must install this security code

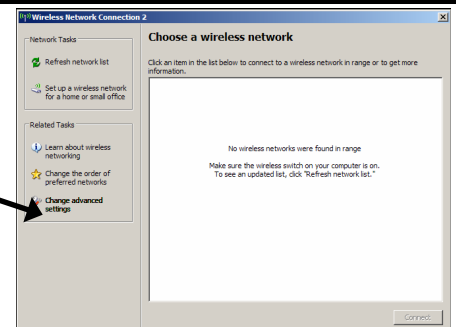

#1 Open Wireless Network Connection

- Click on the Start button
- Go to the Connect To option
- Click on Wireless Network Connection option

#2 Enter the Wireless Configuration Utility

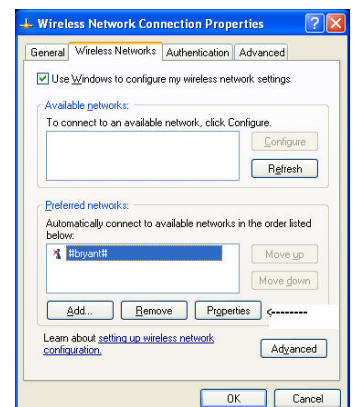

- Click on the “Change advanced setting” button in the lower left-hand corner

#3 Edit the Advanced Settings

- Click the “Wireless Networks” tab
- Then highlight the **#bryant#** network and click on the “Properties” button

Note: If **#bryant#** does not appear, click “Add” and enter **#bryant#** in the “Network Name (SSID)” box

#4 Install Wireless Security Key

- Under the Association tab, select:
 - “Open” for Network Authentication and “WEP” for Data Encryption
- Uncheck the “The key is provided for me automatically” box
- Insert the following *case-sensitive* network key: 2BCACCE551C1A551AB03654321
- Click the OK button and exit the utility
